

Fatty Acids Plant

Fatty acid is the generic name for organic acids, which occur in the nature mostly in the form of oils, fats and waxes. Oils and fats are predominantly comprised of triglyceride of fatty acids, both saturated and unsaturated. For variety of applications of fatty acids, oils and fats are being hydrolyzed into fatty acids and glycerol. Further purification and separation, the crude fatty acids are distilled for range of fatty acids or fractional distillation for individual fatty acid in its pure form. We provide various capacities batch and continuous distillation and fractional distillation plants with utility equipments and services.
